Company Overview

*Software Consulting Hardware,
Inc.'s (SCH) corporate
headquarters is in Cincinnati,
Ohio. SCH has provided
consulting/technical services, IT
personnel as well as software and
hardware solutions since 1995.*

Software solutions include:

*Lakeview Technology
Lotus/IBM
PowerTech Group
New Generation Software
Harris Data
VAI
Baan
Infinium*

Consulting:

*Technical Services
Application Development
IT Personnel
Project Management*

Hardware:

*IBM (iSeries, pSeries, xSeries)
IBM peripherals
Network1
Barracuda Networks

Warehouse Distribution

- ◆ Eliminate Errors
- ◆ Improve Response Time
- ◆ Capture Data Real-Time

Automated Data Collection has a Return On Investment in MONTHS, not years.

Manufacturing

- ◆ Better Manage Resource Planning
- ◆ Improve Product Tracking
- ◆ Reduce Labor Costs

Retail

- ◆ Improve In-Store Inventory Control
- ◆ Immediate POS Data Capture
- ◆ Reduce Labor Costs

Studies show that 1 error in 300 entries occur in manual data entry compared to 1 error in 3,000,000 entries using ADC.

Data Collection Products

Will...

Increase operating efficiency by reducing errors and costs. Whether your company is retail, manufacturing or distribution, ADC is a solution worth investigating.

SCH is a supplier for many leading manufacturers of ADC solutions.

Consulting & Technical Services

Implementing or enhancing data collection systems can be overwhelming while trying to run daily operations. SCH can assist in design, product selection, integration with existing applications or systems, training/support, and final implementation.

Why Automate Data Collection?

- ◆ Increases inventory accuracy
- ◆ Streamlines tracking of stock-keeping locations
- ◆ More efficient picking and packing
- ◆ Eliminates costly data entry errors
- ◆ Less time consuming than manual entry
- ◆ Reduces labor costs
- ◆ ROI in months not years

Bar code scanning, mobile computing, wireless networking, and printing solutions help to ensure a smooth running operation.

The error rate in bar code technology is approximately 10,000 times lower than in manual keyboard data entry.

The speed of data entry with handwritten documents is approximately 5-7 characters/sec and 10-15 characters/sec (at best) for keyboard entry.

Automated identification methods are capable of reading hundreds of characters per second.
