PRESS RELEASE

YEstation MAX Enhanced Price Unchanged

Tempe, Arizona
June 14, 2007

The *YEsterm* MAX II Thin Client, introduced in June 2005, has been significantly enhanced. The current version is 20% faster than the original Gigahertz processor, and features stunning graphical presentation with a choice of embedded Operating Systems, Windows CE.net, XP embedded or Linux.

***MAX II* supports video resolution up to 1600 X 1200 and 32-bit colors.
The new series is available in two form factors, a traditional modular logic unit or
an integrated logic/TFT Display (shown here) with digital video.**

The enhanced Thin Client has VGA and DVI video ports and Windows XPe supports the dual monitor configuration as an extra wide desktop (if desired) providing a double wide desktop as shown below.

“Dual screen support is popular in customer service applications where the customer and service provider can each view a display in a counter service environment. A flat panel LCD monitor footprint is less than half of a similar sized CRT, making it possible to place two flat panel units in the space of a single conventional monitor. They use a lot less power too.” according to Del Lawin, Vice President of Technical Operations.

Feature Highlights:

(New enhancements in red)

- **VIA C7 CPU**
- **10/100/1000 Mb Ethernet, Auto Sensing**
